## **PENKO expands its range with Rembe products**

### **Now the “Deutsche Gründlichkeit” is found in The Netherlands**

As of October 1, 2011, **PENKO Engineering B.V.** is an official distributor of the German company **Rembe Control Division GmbH.**

In the Dutch Solid Handling market, process control (track & trace) is becoming increasingly important and thus accuracy needs to be elevated to a higher level. The weighing technique is a proven method of accurate process control. In this fast changing day and age and the increasing need of software integration into automation processes, it appears that signal generator and signal processor are moving further and further apart. On the other hand, weighing still remains a mechanical challenge and there is still the electronic conversion of the output signal. However, data processing is increasingly being conducted by software applications which provide a seamless integration in a PLC/PC environment.

The experience of Rembe GmbH in flow metering offers internationally recognized products and suppliers. Rembe GmbH has been active in mechanical weighing solutions in Solid Handling for more than 35 years. The development and production of Belt Weighers and patented Flow Meters has made Rembe to a market leader in Germany.

Product knowledge, service, fast delivery and the best price/quality ratio, have been the pillars of PENKO for many years. This is now being extended with the integration of quality products by Reme – As an example, we can now offer a 10 year guarantee on Belt Weighers.
